

AMENDMENTS TO THE SPECIFICATION:

Please replace paragraph [0021] of Applicants' published application with the following amended paragraph:

[0021] Synchronization packets in mode 2 can also be "across modes synchronous" when the time between packets is larger than the time the master spends in mode 1 (Bluetooth mode). The same can be applied for synchronous packets in mode 1. In FIG. 8, there is shown a time line highlighting "across ~~within~~ mode synchronous packets". Synchronous packets occur in time periods 802 and 804.
